

Oxygen Express for Nokia phones

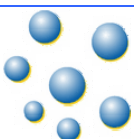

<http://www.oxygen-express.com>

Oxygen Express for Nokia phones is an easy-to-operate tool for preventing your personal information from being lost. Transfer all your data from old mobile phone to a new one, make backup copy of your phone information and settings, keep your privacy by clearing phone memory before phone sale – all these operations take only several minutes with Oxygen Express!

Oxygen Express at a glance:

- **With Oxygen Express you will never lose your data. Even if you lost your Nokia.** Oxygen Express creates backup of your phone data and recovers it back to your Nokia or any compatible phone when needed. Backup files can be protected with individual passwords.
- **Migrate to a newer model without headache.** What are you doing first after obtaining a perfect new phone model with a lot of new features? Spending hours to manually retype all contacts, schedules, tasks and other personal information from your old phone or running a CD from the phone box with a standard PC Suite utility that loses half of data during upload. Oxygen Express knows how to migrate from your old phone to a new one correctly. It needs only several mouse clicks and few minutes to transfer to your new phone all your contacts, caller groups information, events, tasks, notes, SMS and MMS messages, images, wallpapers, melodies, ringing tones, themes, videos, voice records, Java applications and games, play lists, profiles, FM stations, WAP and GPRS settings, WAP bookmarks and even call history lists!
- **Clear up your old phone before sale.** Oxygen Express has a feature of one-click removal of all your personal information stored in mobile phone. It might be very useful feature when you're going to sell the phone or to give it to someone.
- **Fast, simple and easy-to-use.** Most of the program actions performed by one mouse click. All operations have hot keys assigned and intuitively transparent interface. You really don't have to be a PC expert to protect your mobile phone information from being lost.
- **High usability and convenience.** Oxygen Express automatically searches the phone and when it's connected you need only to make one mouse click for full backup or restore your phone information and settings.
- **More than 150 Nokia models are currently supported. And the list is rapidly growing.** If your model is not supported yet, it means either it will be supported in the next release or it cannot be connected to PC for data exchange at all.
- **Fast upload to your phone new wallpapers, ringing tones and Java games.** If you found somewhere in Internet nice wallpapers, ringing tones or Java games for your mobile phone, it takes only few seconds to upload them to your Nokia. And unlike downloading multimedia content via GPRS from special paid portals, this operation is absolutely free.
