

Oxygen Phone Manager II for Symbian OS smartphones

<http://www.oxygensoftware.com/>

Oxygen Phone Manager II for Symbian OS smartphones is a unique communication software tool for mobile phones based on Symbian OS. It offers a powerful combination of features for managing the content and settings of your smartphone from a personal computer.

Oxygen Phone Manager II for Symbian OS smartphones at a glance:

- **Smart software for your smartphone. Originality and power.** This is unique PC software supporting fully interactive management of your smartphone information. You can easily organize your phonebook, events and tasks, images and photos, melodies and ringing tones as well as video clips. You also can upload new wallpapers and ringing tones, send and receive SMS, and view many types of messages supported by your smartphone, including plain or Unicode SMS, MMS, e-mail, BIO and others.
- **Makes your PC a keyboard and display of your mobile phone.** Edit your phone data easily from PC and see what you've got in the phone immediately on your PC display. No need to make synchronization to add or modify a couple of contacts or calendar events. Unique easy ad-hoc data editing.
- **All released Symbian OS smartphones are supported. And the list is rapidly growing.** If your smartphone is not supported yet, it means either we are already working on this and it will be supported in the next release or the model is as rare as we can not obtain it to test, so we need a little help from you to make Oxygen Phone Manager compatible with your model.
- **It takes only few minutes to transfer your personal information from your old phone to a new one.** All your contacts, events, tasks, images, photos, melodies ringing tones and videos will migrate to your new phone with several mouse clicks. Even if the old phone was a plain Nokia model (not a smartphone), you can save all the needed information to your hard disk by Oxygen Phone Manager II for plain Nokia phones and then load it to your smartphone with Oxygen Phone Manager II for Symbian OS smartphones. It knows how to transfer all the data correctly.
- **You can lose your smartphone, but you will never lose your data.** The copy of mobile phone information settings is stored on your local hard disk which is more secure than remote Internet storages. Even if your smartphone was stolen or damaged, its data is still available and can be easily transferred to a new phone.
