## **First Certified PC Software for Mobile Phones**

*A series of tests conducted recently on Oxygen Phone Manager confirms excellent performance of the software on Nokia and Samsung phones. Ladofon, an authorized service centre representing both these producers, certified full compliance of Oxygen Phone Manager with declared features. Oxygen Software and Ladofon have agreed on mutual cooperation.*

Oxygen Software, the developer of software for mobile phones and smartphones, has become the first company to certify its software with an authorised service centre. A series of tests was performed by the expert panel of Ladofon, the authorised service centre of Nokia and Samsung. The tests showed full compliance of Oxygen Phone Manager with the declared features. The tests also assured the compatibility of Oxygen programs with phone firmware and the safety of use on Nokia and Samsung phones. Oxygen Software and Ladofon are now discussing possible ways of cooperation.

"We hope that the certification of Oxygen Phone Manager by a qualified panel of experts will assure users once again of the highest quality and safety of Oxygen software," says Nike Golubev, PRO at Oxygen Software. "In the global software market consumers often find themselves under the deluge of claims that can lack foundation. At Oxygen Software we feel pride in our products and honestly believe that they serve the best interests of users. We want our customers to be as sure as we are of the quality of their software."

Oxygen Software has long been known for an innovative approach to software development and marketing. It was one of the first to offer interactive management of mobile phone contents. The idea of turning a personal computer into a console for texting, dialling and accessing contacts was just what users needed at the time. That explains the unprecedented rise in sales that the company continues to enjoy and a large number of commercial partners it has. Forensic mode of accessing phone contents was another step in the right direction. Software that can manage the contents on a PC while keeping it intact on the phone itself met the demands of police departments. It now helps maintain peace and order in different parts of the world. Now Oxygen Software has become the first to offer certified quality software to their customers worldwide. It all demonstrates the company's deep understanding of user needs and the ability to satisfy them.

Oxygen Phone Manager II is a flagship of the company's product line. It has versions for both Symbian smartphones and mobile phones. The program backs up, synchronises and manages all the data types available in modern phone models. Its list of manageable features covers everything from the phonebook and calendar items to FM radio and GPRS settings. The widest range of supported models allows moving the settings and content between them with just several mouse clicks. Oxygen Phone Manager II will automatically detect your model and choose an appropriate data format. With its unique ad-hoc editing you can make the most of the rich multimedia features of your phone. No less important is the program's backup system, which saves phone contents to a hard drive and protects them with a password. It is exactly for this rich functionality and the unparalleled ease of use that home and professional users alike prefer Oxygen Phone Manager.

## Oxygen Phone Manager Features at a Glance:

- Support for about 200 models of mobile phones and smartphones;
- Support for IrDA, Bluetooth, and cable connectivity (USB and serial port);
- Interactive access and management of contacts, calendar entries, gallery entries, connectivity logs, profiles, FM radio, GPRS and WAP settings, voice records and more;
