Valuable Complement to Vertu Handsets

The new Vertu Edition of Oxygen Phone Manager II has become the first software product to support the performance of Vertu handsets with interactive access and content management. For those who demand the best in everything and does not compromise on quality Oxygen Software introduces the ultimate experience of comfort and freedom. The new edition crowns years of research and testing conducted by expert developers.

Oxygen Software LLC announces today the release of a special edition of Oxygen Phone Manager II for Vertu handsets. The same expert team that engineered forensic software for the Metropolitan Police of London now offers their experience and knowledge in the new masterpiece of software development. Oxygen Phone Manager serves the dual purpose of protecting and managing the contents of Vertu handsets. The program makes personal contents and settings of a phone accessible and manageable from PC. Now, the owner of Vertu Signature or Vertu Ascent will not only be able to replicate personal contents and settings to a hard drive, but also manage contacts and schedule events, upload multimedia files and tune up the handset directly from the PC keyboard. Oxygen Phone Manager complements the performance of the elegant jeweled handsets with unparallel freedom and security.

Commenting on the program's release, Nike Golubev, Public Relations Officer for Oxygen Software LLC said, "Oxygen Phone Manager II has a history of improvements that allows it to claim the superior position in its class. Prior to the decision to port it for Vertu handsets, Oxygen Phone Manager II underwent a series of tests with industry expert panels. Independent assurances of the program's performance align it with the best standards of craftsmanship. The quest for ultimate performance has always been the hallmark of Oxygen Software products. We now offer the same excellence of performance to the owner of luxury handsets."

As well as protecting personal data, Oxygen Phone Manager II helps transfer it between handsets. The program enables the transfer of the phone book, events and tasks, settings and other content between handsets. For example, the user can quickly migrate from Nokia to Vertu, or from revving Ascent Motorsport to exquisite Signature Platinum. Oxygen Phone Manager II supports a wide range of handset models by different producers, including smartphones. It automatically identifies the model and converts data to a compatible format. Oxygen Phone Manager makes certain that the personal contents of a handset are safeguarded and recoverable at any time.

Following the quest for ultimate performance, the developers of Oxygen Phone Manager spent years perfecting the product. Its every feature is designed to provide great comfort and security. Wireless connectivity via a Bluetooth or infrared port imparts the unlimited freedom of movement. A unique ad-hoc editing system allows accessing the handset's memory and managing virtually every setting from the computer keyboard. While synchronizing the data with personal information managers like MS Outlook or Lotus Notes, it is possible to select only specific entries to be synchronized. Oxygen Phone Manager II is comfort in every stroke. It is the best complement to the performance of Vertu handsets.

Oxygen Phone Manager II Features at a Glance

- Support for mobile phones and smartphones by Vertu, Nokia, Sony Ericsson, Motorola, Samsung, Siemens, Panasonic, Vodafone, Sendo, BenQ;
